

IDEA App Analytics P2P

Version 2.1

The new IDEA app Analytics P2P version offers you a number of updates and enhancements, including for the **Standard Import Routine** and the **Data Requests**.

Below you will find a brief overview of all new features to help you get started with the current version.

Importing the IDEA app Analytics P2P version 2.1

Fast and simple import of the current version

The new version of the IDEA app Analytics P2P is a full version. This version can be used for new installations as well as for an update of an already existing version. If you have already imported the previous app version 2.0, you can simply import the new version over the existing one.

There are two ways to import the new app to IDEA:

- Simply **double-click** the app to import it while IDEA is closed.

- Import the app from within IDEA using the **App Management** wizard.

You do not need administrator rights to import the app.

For a detailed instruction on how to import the current version, please refer to the "Installation_Guide_IDEA_App_Analytics_P2P_V2.1.pdf" file. Please also consider the system requirements, which you will find in the "System_Requirements_IDEA_App_Analytics_P2P_V2.1.pdf" file. Both files are included in the app download package.

New features and enhancements in version 2.1

Increase in performance

Extensive improvements in the macros have significantly optimized the **runtime and speed** of audit tests in conjunction with IDEA 12.2. It is therefore recommended that you use **IDEA version 12.2 or higher** for the best possible user experience.

Significant **performance improvements** have also been implemented for the **Data Requests** and **Standard Import Routine**.

Data Requests:

- SAP - SmartExporter P2P - Master Data (2.0.7)
- SAP - SmartExporter P2P - Transaction Data (2.0.14)

Standard Import Routine:

- SAP - SmartExporter P2P (2.0.5)

Known issue

Limited display of graphical results

On a computer configured according to the Federal Information Processing Standards (FIPS), you may experience limitations using IDEA 12.2 when you run an audit test that produces a graphical result. Graphical results may not be displayed.
